It used to take two to three weeks to get a new computer on a user’s desk. Now, using SmartDeploy, users at our central office who order a PC by 10 a.m. can have a fully configured on their desk by 3 p.m. that same day.

Alan Kurk  
CIO, Information Technology

Innovative features reduce the technical complexity of deployment and increase IT productivity and corporate security. By helping you work more efficiently, SmartDeploy reduces direct and indirect costs associated with traditional deployment solutions. SmartDeploy makes the most of your environment – from staff and administration to hardware and network resources.

SmartDeploy allows users to:

- Independently manage hardware and software packages
- Deploy to thousands of machines with a single toolset
- Reduce your library to a single image that can be used on any device
- Eliminate reference computer inventory by using a virtual machine as a reference computer
- End driver problems with downloadable, pre-built device driver packages
- Simplify management by eliminating deployment-specific infrastructure and hardware
- Reduce storage by an average of 80 percent or more
- Reduce deployment-associated labor by 50 percent or more

Based on user reports.

I’ve been able to use the same image on disparate hardware with zero problems; Dell Precision T3600 and M6300, XPS 12 and 15, HP Pro 3000. SmartDeploy did this seamlessly and paid for itself many times over.

- Brian McMillian, BKM Total Office of Texas

Architecture Overview

Leverage an existing IT Workstation to build and manage all components of the deployment package. Additional hardware or resources are not needed to use SmartDeploy.

You can then deploy directly to any target device. Leverage the power of your network, storage, or IT management products for increased functionality.

To learn how SmartDeploy can fit within your organization, contact a product specialist at sales@smartdeploy.com or call us at 888-7DEPLOY.
